**In the Claims:**

1-23. Cancelled.

24. (Currently Amended) A method of inducing organized, functional bone formation at a site of bone infirmity in a human, comprising the steps of:

- (a) transforming a cultured mesenchymal stem cell with a DNA encoding human bone morphogenesis protein 2 (BMP-2);
- (b) culturing the cultured mesenchymal stem cell transformed in step (a), under conditions enabling expression of said DNA encoding bone morphogenesis protein 2; and
- (c) implanting said cultured mesenchymal stem cell in an allogeneic subject, at a site of bone infirmity

whereby autocrine and paracrine effects of expressed human bone morphogenesis protein 2 at said site of bone infirmity result in organized, functional bone formation, thereby inducing organized, functional bone formation at a site of bone infirmity.

25 (Previously Presented) The method of claim 24, wherein said mesenchymal stem cell is a primary cell.

26. (Previously Presented) The method of claim 24, wherein said mesenchymal stem cell is a cultured cell line.

27. (Previously Presented) The method of claim 24, wherein said mesenchymal stem cell expresses an endogenous bone morphogenesis protein receptor.

28. (Previously Presented) The method of claim 24, wherein said mesenchymal stem cell expresses parathyroid hormone and a parathyroid hormone receptor protein.
